Intro

Hello World! I am a software engineer who's led org-wide, broadly impactful AI initiatives at a fast-paced startup. I design and deploy AI Native systems ranging from specialized agents to company-wide developer platforms to AI infrastructure/MCP servers. By taking initiative and always considering our roadmap and customers, I've proactively established tenets for using AI tools and design patterns for how AI systems are built and secured across the org.

Education

University of California, Berkeley | Double Major in Data Science and Economics

May 2024

- Activities: Drawn to Scale A Cappella (President), CalHacks, Association of Women in Engineering, Data Discovery Research Program, Big Data @ Berkeley, Sustain Point Consulting, AFX Dance

Fudan University | Study Abroad Program in Information and Computer Science

August 2023 - December 2023

Work Experience

Software Engineer, AI Native -- [Cambridge Mobile Telematics](#)

August 2024 – Present

- Designed and built Claude Agent SDK-based agent harness that intelligently generates pull requests from Jira tickets as a long-running process, leading to extreme productivity with minimal human involvement. Implemented shared memory via DynamoDB-backed summaries and an internal MCP layer for inter-agent communication. Deployed to 5+ CMT teams with 70% approval rate of PRs, and increased PR throughput by ~20% per team.
- Delivered an MCP orchestration platform enabling self-serve AI agents and Slack chatbots (including an agentic IRT triager and AskPlatform bot) with built-in auth, MCP server registry, conversational memory, and self-learning.
- Proactively defined org-wide “AI power user” rubric and metrics dashboard to measure meaningful AI adoption, and increased power users from 33% to 47% in one quarter through cross-org influence and leadership.
- Shipped an AI text-to-SQL bot to query internal production Redshift and Postgres databases for non-technical users directly in Slack or through an MCP client.
- Ideated and architected an external MCP server for SDK documentation, decreasing mobile app development time for customers incl. DoorDash from ~5 days to 3 hours. Designed an authentication server for deploying all future external-facing MCP servers to prod environments, setting the precedent for auth flows.
- Built and led adoption of a custom Python backend build system, unifying per-service custom scripts into a self-service command line tool. Reduced new service setup time from days to hours.

Software Engineering Intern -- [Brown Brothers Harriman & Co.](#)

June 2023 – September 2023

- Refactored a financial web application from JSP to Angular and Spring, improving page load time by 40%.

Software Engineering Intern -- [BAE Systems](#)

June 2022 – September 2022

- Built internal frontend features using TypeScript and REST APIs.
- Earned internal company award for organizing and leading the annual Bike Drive fundraiser.

Head Tutor and Course Liaison -- [UC Berkeley Student Learning Center](#)

January 2022 – December 2022

- Provided tutoring for hundreds of college students in Macroeconomics, assisted in the preparation and facilitation of exam reviews and tutoring material, utilized a variety of teaching methods to ensure student comprehension.

Academic Intern -- [UC Berkeley Division of Computing, Data Science, and Society](#)

January 2021 - December 2022

- Answered questions about lab/lecture content for UC Berkeley's Foundations of Data Science course (Data 8).

Projects

Build Your Own World | Java

- Created an engine for generating explorable worlds in 3000 lines, similar to the tile-based game Brogue.
- Used Disjoint Sets data structure in order to successfully connect rooms and hallways.

BearMaps | Java

- Combined data structures (KD-trees, Extrinsic MinPQ) and A* algorithm in order to implement a web-browser mapping application called BearMaps. Built an artificial intelligence that can solve arbitrary state space traversal problems using A* algorithm. Wrote original timing and logic tests.

Skills: Python ▪ SQL ▪ AWS ▪ Docker ▪ Jenkins ▪ DataDog ▪ LangGraph/LangChain ▪ MCP Servers ▪ Slack Bolt ▪ React ▪ Scikit-Learn ▪ Tensorflow/Keras ▪ Git ▪ Figma ▪ Atlassian ▪ Claude Code/Cursor/Codex

Certifications: CodePath Advanced Software Engineering 2022, DeepLearning.AI Tensorflow Developer 2024

Interests: AI Native tools ▪ Full-stack Development ▪ Product Management ▪ Leadership ▪ Customer Solutions
