

ABOUT

Curious about systems, and the people who use them.

I'm Lilly — a software engineer who cares as much about how a tool feels as what it does.

I studied Data Science and Economics at UC Berkeley, where I got hooked on the space between data, decisions, and design. That mix still shapes how I work: I like problems that are technical and human at the same time.

Today I build AI-native tools at Cambridge Mobile Telematics — platforms for internal chatbots and workflow assistants, safe self-serve data access, incident response, and developer tooling that raises the floor for everyone on the team.

I care about making complex systems feel simple. The best engineering I've seen disappears into a clear interface, a fast feedback loop, or a decision someone can finally make with confidence.

 ENGINEERING PHILOSOPHY

Build the simplest thing that makes a hard decision easy — then make it feel good to use.

Lilly Liu

Berkeley → Boston

Things I care about

Making complex systems feel simple

Building tools people actually want to use

Thoughtful automation

Clear interfaces for complicated ideas

 Learning in public

 Mentorship and community

A short path so far

EDUCATION

UC Berkeley — Data Science & Economics

Where quantitative thinking met a fascination with how people and systems actually make decisions.

EARLY ENGINEERING

Learning to ship

Early roles turning ambiguous problems into working software — and discovering that the interface is part of the system.

NOW

AI-native tools · Cambridge Mobile Telematics

Building AI platforms, developer tooling, and data products that help teams move faster and make better decisions.

What I'm up to now

LL Lilly Liu

A software engineer building thoughtful systems with AI — and a small corner of the internet that keeps growing.
