4+

AI platforms shipped

ENGINEER

AI-native engineering

Designing tools where models are a first-class material, not a bolt-on feature.

Developer velocity

Building standards and tooling that help teams ship better code, faster.

Systems that help people

Interfaces for complicated ideas so people can make better decisions.

SELECTED WORK

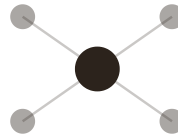

A few things I've built

All work →

AI Data

2025

Text-to-SQL Assistant

A safe internal AI tool that lets leadership ask questions in plain language and get trustworthy answers from the data warehouse — no SQL required.

LLM orchestration

Postgres

Semantic layer

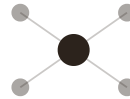

Guardrails

Next.js

[View case study ↗](#)[Source](#)

AI Infrastructure

2025

Conversational AI Orchestration Platform

A platform powering internal AI chatbots and workflow assistants, with shared tooling, evals, and routing across many use cases.

Agents

Tool calling

Evals

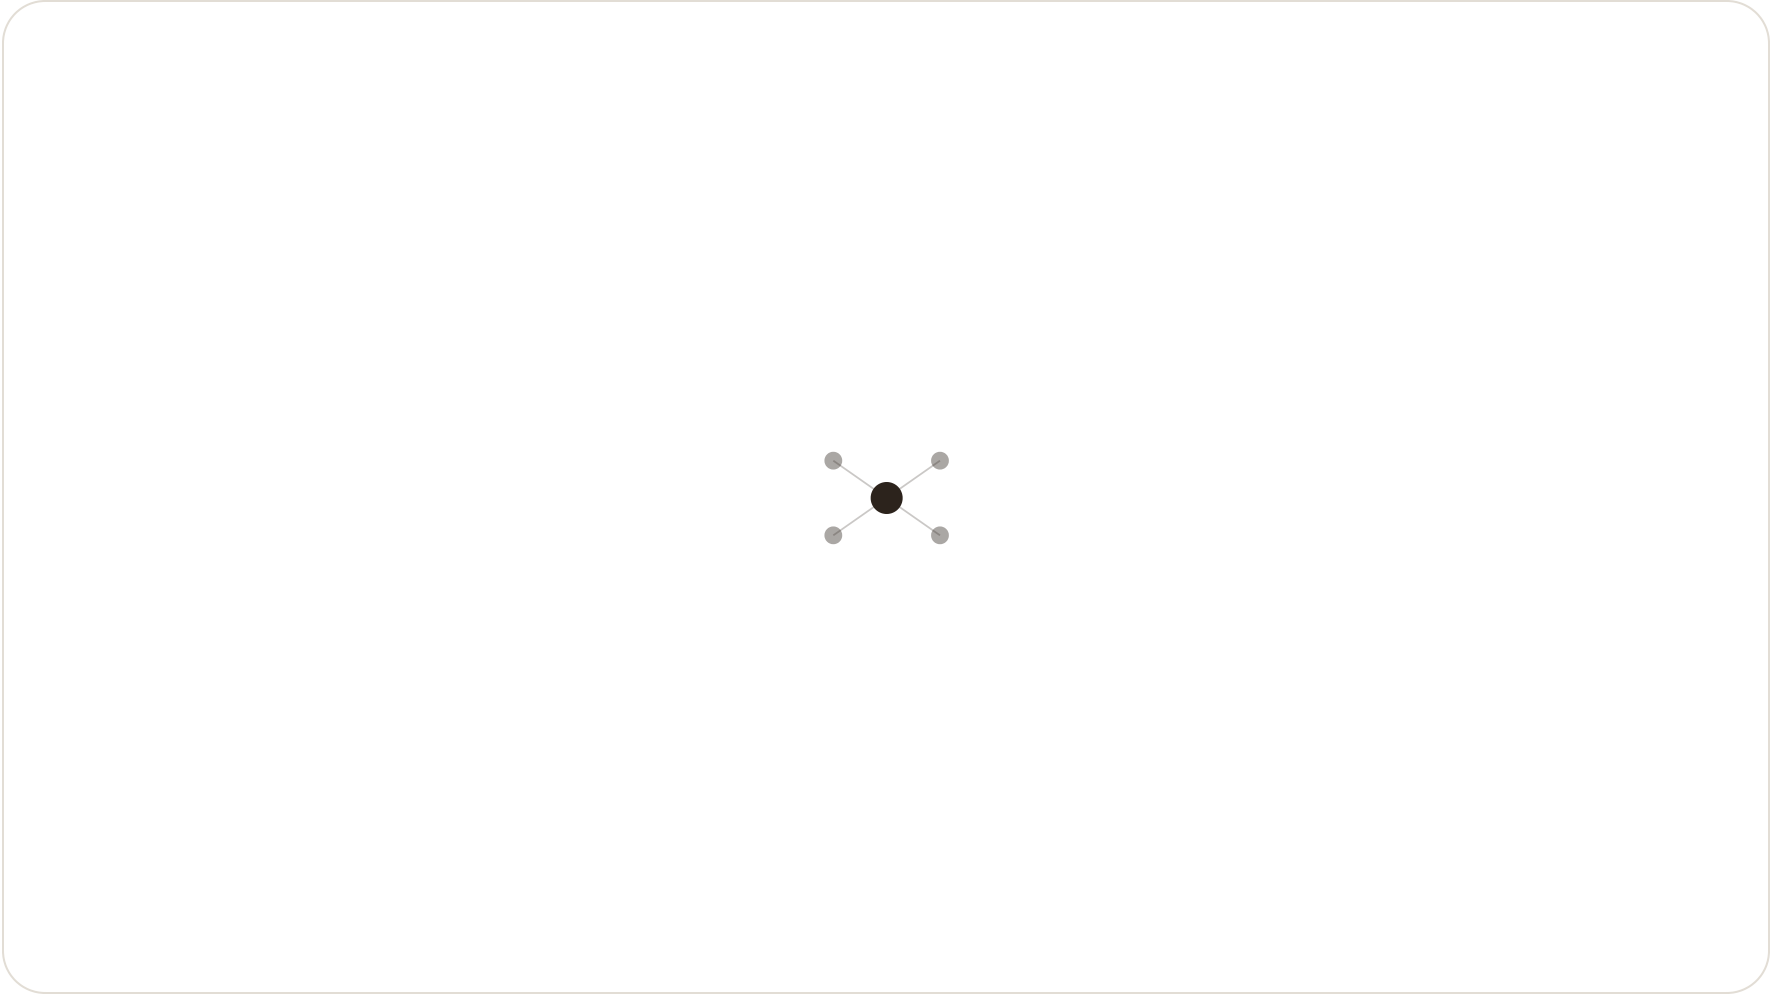

Vector search

Observability

View case study ↗

AI Infrastructure

2024

Incident Response Assistant

An AI assistant that helps on-call engineers investigate and respond to operational incidents by gathering context and suggesting next steps.
